Delivery & Sample Certificate

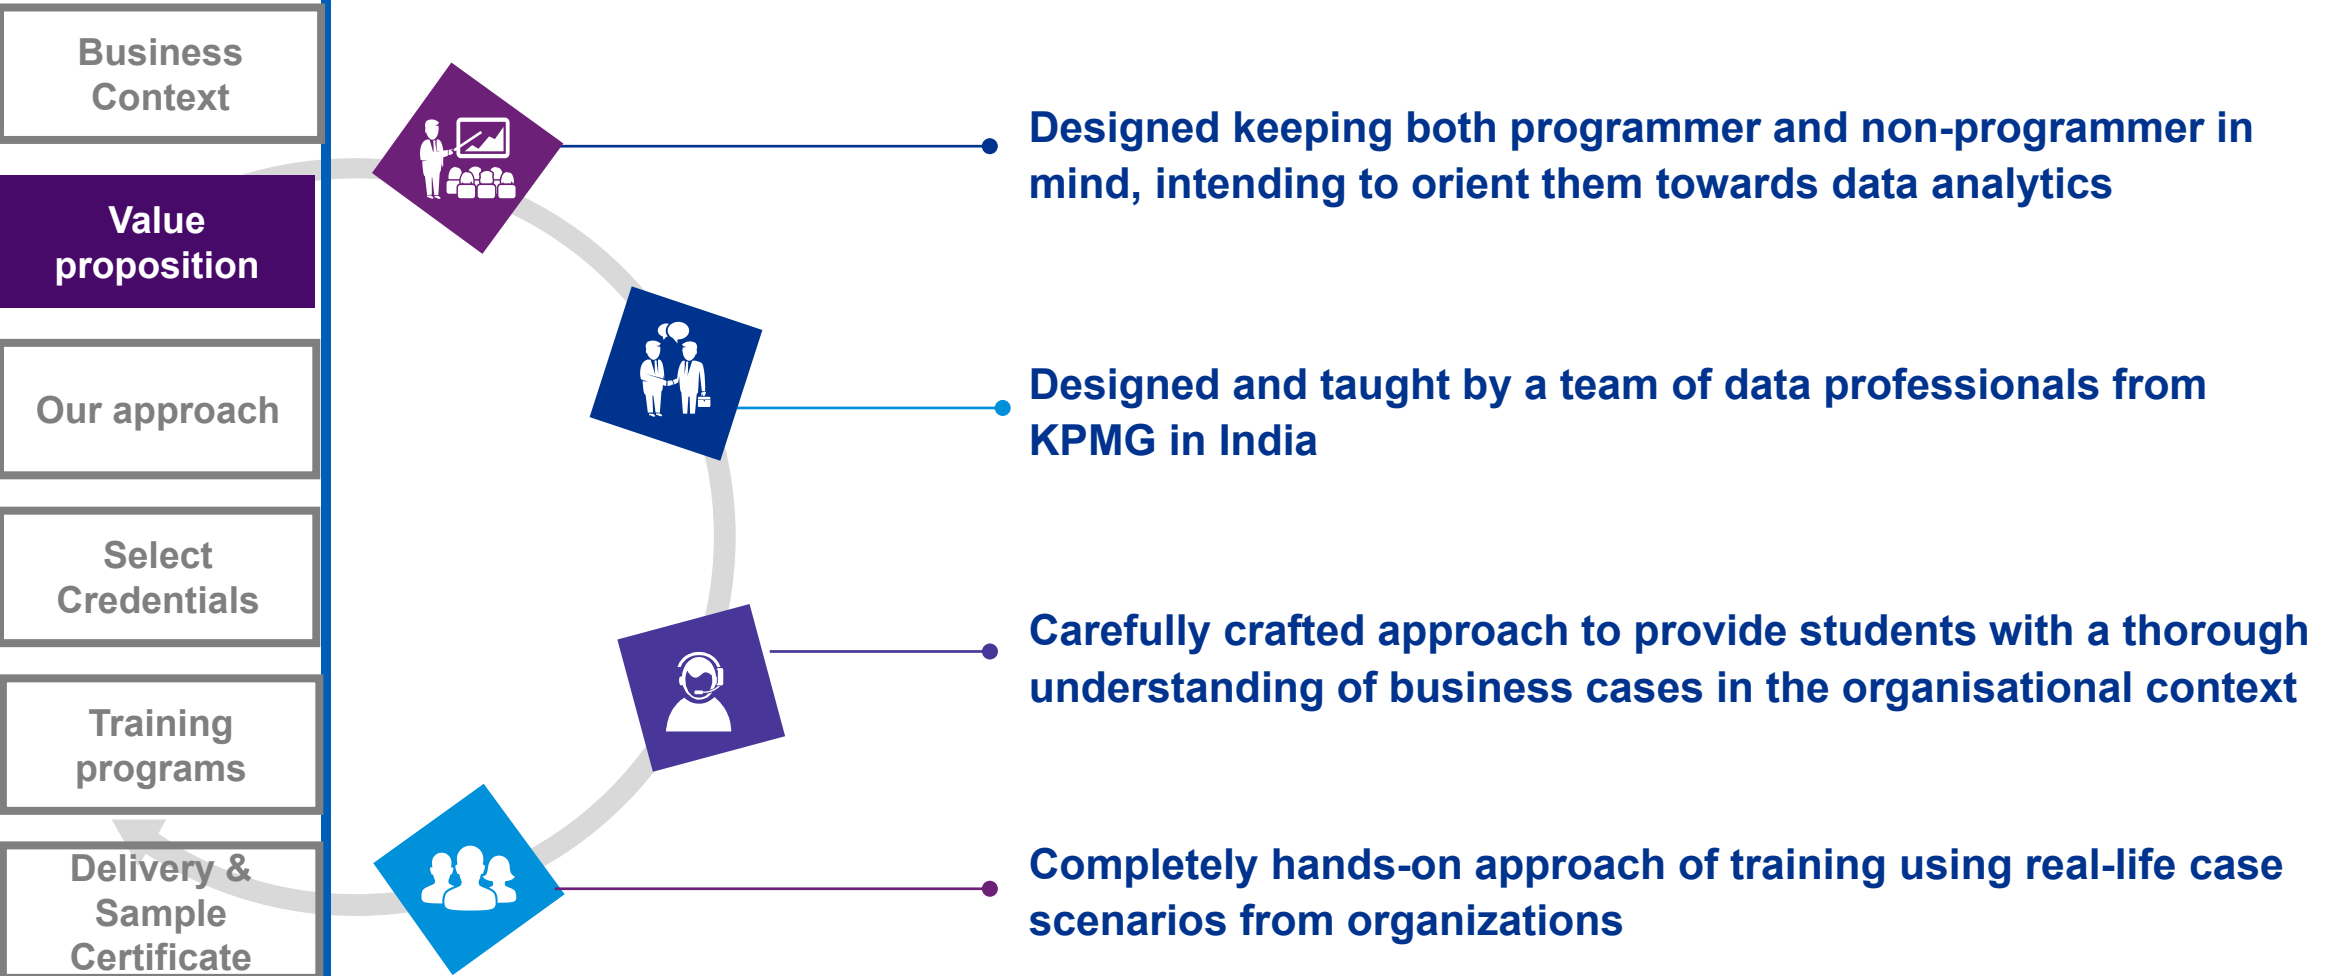

In this digital age, the scope of business analytics as a career has grown immensely. This is evident from the increase in jobs for professionals with a qualification in business analytics and it is also estimated that in the next few years, the size of the business analytics market may evolve rapidly in the global scenario.

It is quite probable that there might soon be an acute shortage of skilled data analytics professionals to cater to the growing demand in the industry.

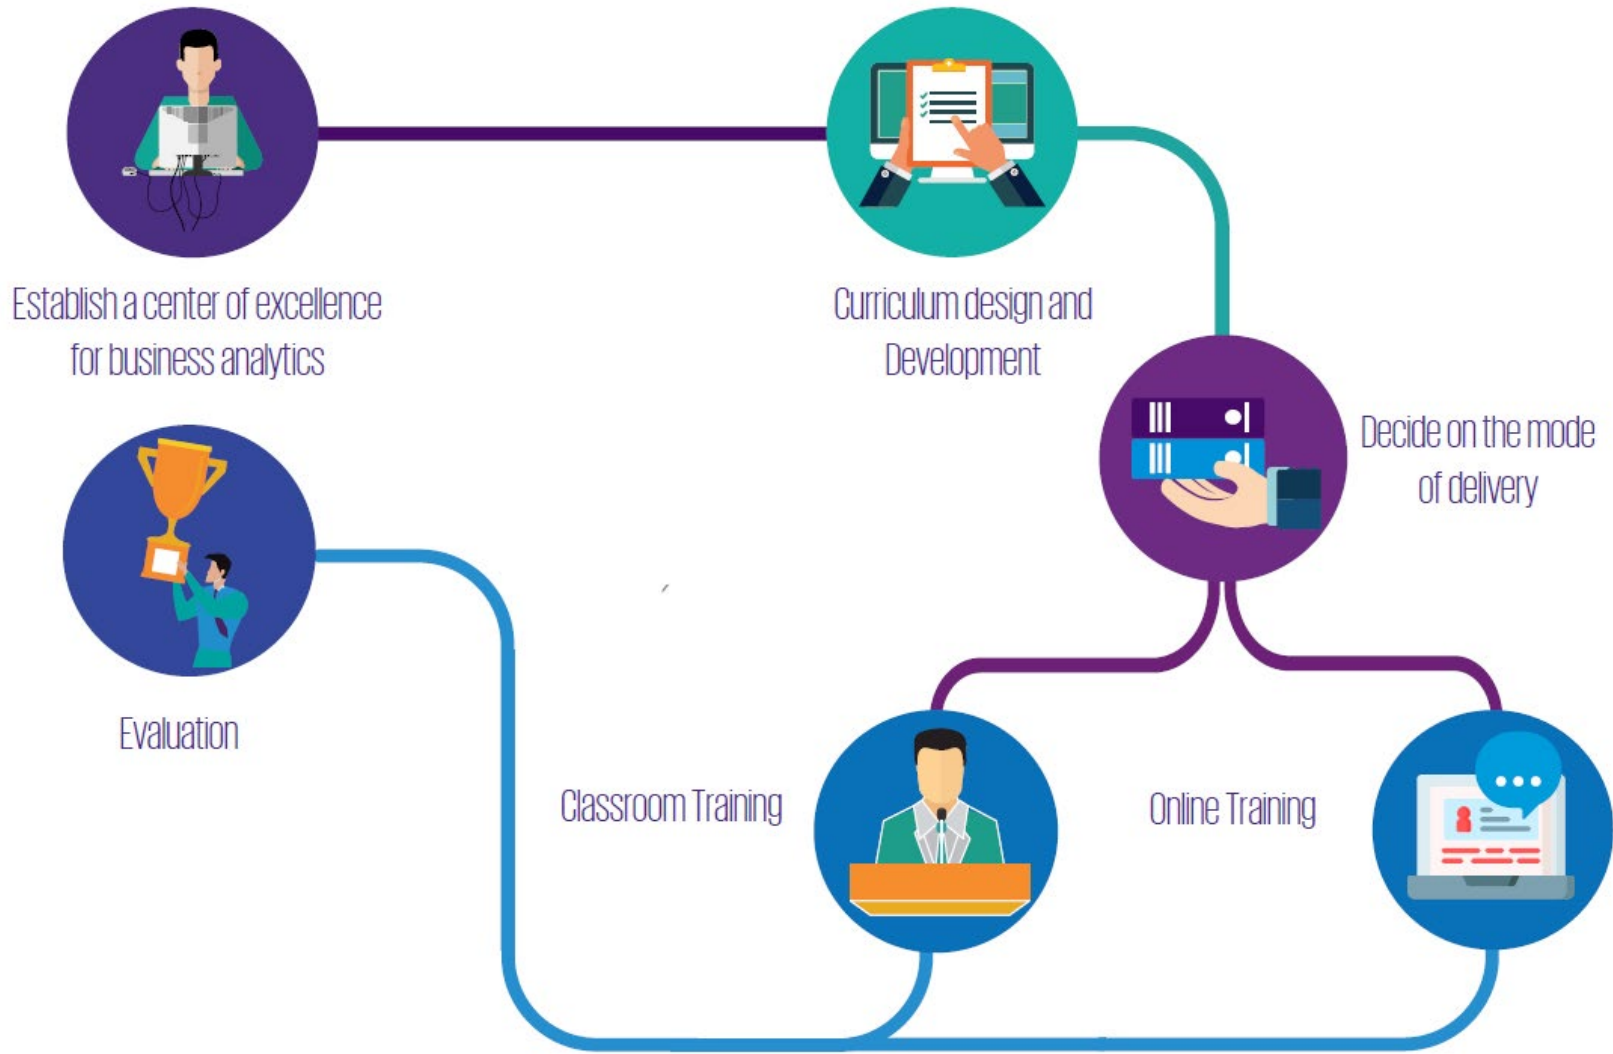

To meet the inevitable demand for skilled and equipped business analytics professionals, KPMG in India has designed training courses, specially keeping in mind students of various undergraduate and masters programmes. These courses seek to give participants hands-on exposure to powerful tools used to analyse data. They aim to familiarise participants with practical, real-world data analysis.
